North America | UK | Europe | India

The Challenge

The industry needs to achieve data submission as quickly as possible. The quicker they submit data, the faster they receive regulatory approvals and help patients in need.

Addressing the **Challenge**

ApoGI connects the dots from the study setup phase. With metadata available for a study, ApoGI identifies the best transformation algorithms for legacy as well as CDISC complaint studies (both conversions and transformations). With the capability to produce transformed data, data is ready for review and can generate specifications and other submission-related documents.

ApoGI also allows organizations to override the recommendations as per their need and follow certain standards of their choice. This helps in adding to the learning curve for ApoGI with AI/ML modeling for more precise recommendations in new studies having similar requirements with more training.

Outcome

ApoGI helps accelerate automation in transforming data for submission activities with regular use. With few initial studies transferred using ApoGI, users can easily achieve a minimum of 70% automation for subsequent studies.
